

Reflection

Reflection from last semester.

What's good?

All the team members were happy with teamwork and the MVP delivered last semester.

What needs to improve?

The team needs to use slack and troller more often than last semester.

Project development should follow the agile process.

The team needs more communications with clients and tutors.

The team needs to keep sharpening their skills.

Improve the decision log

What do people want to learn?

Front end, UI design, JS, jQuery, HTML, CSS, Django

Reflection from Audit Presentation.

Feedbacks:

- The results of the prototype are high quality, and are exceeding the expected testing for the prototypes // // - Client feedback has been elicited quite well to understand which version of the prototype, at a high level, is fit for purpose for the client // // - **Recommend more frequent paper prototyping of concept early with clients and customers prior to committing to build and test effort** // // - The team are building UI to 'show' what work has been done? Suggest that the team keep this lean, and potentially work out alternative ways in **which they can illustrate the work that they are doing**
- Team has started to think about the transition requirements, which is good // // - **Have demonstrated clear goals for future sprints, with high-level critical milestones developed and identified** // // - Advise Start coding, and be more lean with project planning
- Team has a good cadence, and the new members have been onboarded well
- The project outline is demonstrated quite well with context diagram up front, that shows what the business problem is // // - Good job outlining what was done last semester, last week, and the clear plans for next sprint cycle // // - **Recommend providing more information on decisions to illustrate why design choices were made for features would help communicate the benefits delivered to the client well.**
- Actioned feedback from previous lecturer and tutors to get more specificity in the deliverables // // - **Suggest making this part of weekly / sprint planning, and also do retrospectives better to action feedback**

Feedback analyses:

1. More detailed information delivery of several sections.
 - a. Communications: Not the communication approach, the communications which is relative to the project process.(improvement in presentation delivery)
 - b. Teamwork: More detailed informations beyond just meetings.
2. Focus on how can we show the difference between the two APs.
 - a. Output: Decisions/schedule changes. (Maximise actioning of insights)
3. Presentation performance, based on assessments, the same contents appear in different sections, not wise to conclude in one sections:
 - a. Presentation form change, based on contents sections.(Will it be clear for the tutors and examiner?)

Reflection from Week 4 - Week 6.

- Reflections of the AP1's?
 - Feedbacks analyses.
- Weekly / sprint planning
 - Tasks assignment, cooperations of front-end team and back-end team.
 - Every meeting, everyone states what they worked on last week.
 - Remember our current process, to get useful suggestions from client and tutor.
- Issue: Some tasks delayed, less communication
 - Only delivery tasks on Thursday client meeting, which delay the discussion with our client of several questions when developing tasks.
 - More tasks delivery on Trello and more communication on Slack, have more client meetings.
